

The Political Economy of Deforestation in the Tropics

Robin Burgess, Matthew Hansen, Benjamin A. Olken, Peter Potapov and Stefanie Sieber

Online Appendix

September 2011

This Appendix presents additional tables that are discussed in the text, as follows:

Contents

Timing of district splits	2
Results using 1990 provincial border definitions.....	3
Leads and other robustness checks	6
District splits and capital cities	12
Additional Results on the Political Economy Implications of Oil and Gas Revenue	14
Changing the Oil Per Capita variable to missing rather than 0 prior to 2001	16
Dropping 2001 (so de jure no power period)	17

Timing of district splits

Appendix Table 1: Timing of District Splits

VARIABLES	(1) Year First Split	(2) Year First Split	(3) Year First Split
Population in 1996 (millions)	-0.537 (0.774)	-0.516 (0.770)	-0.737 (0.685)
Total area (millions pixels)	-0.0562 (0.697)	0.0202 (0.727)	0.265 (0.883)
Mean per-capita exp. 1996 (US\$)	-0.0169 (0.0652)	-0.0177 (0.0666)	-0.00933 (0.0762)
Oil and Gas 2001 (millionUS\$)	0.0142 (0.00923)	0.0147 (0.0100)	-0.0123 (0.0231)
Share of land forest in 2000	-3.727 (2.626)	-3.853 (3.000)	-1.488 (2.396)
Share of forest deforested in 2001	-10.25 (55.96)	-19.75 (65.49)	40.42 (80.14)
FE	None	Island	Province
Observations	72	72	72
R-squared	0.076	0.081	0.459

Notes: An observation is a district at the 1996 borders, excluding cities, conditional on at least 1 split taking place from 2001-2008. The dependent variable is the year the first split took place, conditional on their being a split. Province FE are defined using 2008 provincial boundaries. Robust standard errors.

Results using 1990 provincial border definitions

Appendix Table 2: Satellite Data on Impact of Splits, Province Level, using 1990 Province Border Definitions

VARIABLES	(1) All Forest	(2) Production/ Conversion	(3) Conservation/ Protection	(4) Conversion	(5) Production	(6) Conservation	(7) Protection

Notes: The price and quantity data has been compiled from the `Statistics of Forest and Concession Estate'. The price data The *Number of districts in province* variable counts the number of districts within each province. In Panel B the *Number of districts in province* variable only counts the number of *kabupaten* (rural districts) within each province. In Panel C the *Number of districts in province* variable only counts the number of *kota* (major cities) within each province. The regression also includes wood-type-by-province and wood-type-by-island-by-year fixed effects and are weighted by the first volume reported by wood type and province. The robust standard errors are clustered at the 1990 province boundaries and reported in parentheses. *** 0.01, ** 0.05, * 0.1
